DETAILED ACTION

Claim Objections

1. Claims 3-5 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim.

Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claims 3-5 are process claims that does not offer further limitations to the final silica glass product of claim 2.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim recites no signal in the shadography (no shadow or intensity change). It is unclear what shadography is and it is unclear if the limitation in the parenthesis is an additional limitation or alternative limitations.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 1791

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 4. Claims 2-5 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Toki et al. (4,681,615). Toki discloses a sol gel method for forming a silica glass comprising preparing a sol from a silicon alkoxide, hydrolyzing the sol, drying the gel, and thermally treating the sol gel in at a temperature of 800-1500 °C in a controlled atmosphere containing traces of water (abstract, col. 2 lines 45-60, col. 4 line 50 to col. 5 line 23, col. 6 lines 39-47), wherein the controlled atmosphere is expected to have traces of water since water is removed

Art Unit: 1791

from the sol gel though the thermal treatment. Toki discloses a resulting silica glass with high quality (examples). Although the particular properties, such as light transmittance, streak, strip, shadow are not specifically mentioned, these are desired results to be achieved and appear to be inherent to any silica glass, especially when prepared by a similar method steps as defined in the dependent claims. Toki discloses a method substantially similar to the recited claims and resulting high quality silica glass. Therefore, the claimed properties of the silica glass, as recited in claim 2, are assumed to be inherent to the method of Toki. See MPEP § 2112.02.

5. Furthermore, the claimed process limitations recited in dependent claims 3-5 are directed to a method for producing the claimed silica glass product. These process claims are not considered to add patentable weight to the examination of the product claims. See MPEP § 2113.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Queenie Dehghan whose telephone number is (571)272-8209. The examiner can normally be reached on Monday through Friday 9:00am - 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven Griffin can be reached on 571-272-1189. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
